

Forensic Video Analysis Using Adobe Photoshop

Who Is It For: Any employee of an agency that is currently doing or will be doing forensic video analysis and / or using Photoshop for forensic applications.

Course Overview: This workshop will introduce the user to the key features of Adobe Photoshop CS6 Extended and Adobe Bridge for use in forensic video analysis and utilize features for image correction including tools from third-party plug-in applications. Instruction and hands-on practice will include topics on file formats, best practices, setting up an efficient workflow, correcting pixel aspect ratio, de-interlace options, making basic image adjustments, noise reduction, image sharpening, working directly with video in Photoshop and preparing images to print.

Objectives:

1. Understand file formats
2. Learn Best Practices
3. Develop an efficient workflow
4. Understand correct pixel aspect ratio
5. Perform de-interlace options
6. Make basic image adjustments
7. Work directly with video in Photoshop

Duration: 4 days

Minimum and Maximum Number of Students: 14 / 28
